- ✓ Confidential & Compassionate Care

Permanent
Solution

Completely
Concealed

High Patient
Satisfaction

Long-lasting
Results

WHO MAY BENEFIT?

Penile implant surgery may be suitable for men who have:

- Erectile dysfunction not responding to oral medications
- Diabetes-related erectile dysfunction
- Erectile dysfunction after prostate or pelvic surgery
- Peyronie's disease with severe ED
- Poor response or intolerance to injections or vacuum devices
- Desire for a dependable and long-lasting treatment option

COMPREHENSIVE PRE-PROCEDURE EVALUATION

A thorough evaluation ensures the most appropriate treatment and better outcomes.

- Detailed consultation & sexual health assessment
- Medical history, physical examination
- Blood & urine investigations
- ECG & anaesthetic fitness evaluation
- Assessment of diabetes, BP & other conditions
- Medication review (e.g., blood thinners)
- Counselling about expectations, recovery & implant options

PENILE DOPPLER ULTRASOUND EVALUATION

Where indicated, a Penile Doppler Study is performed to assess:

- Penile blood flow
- Arterial inflow
- Venous leakage
- Severity & cause of ED

Helps confirm the diagnosis and select the most suitable treatment.

TYPES OF PENILE IMPLANTS

MALLEABLE (SEMI-RIGID) IMPLANT

- ✓ Simple and reliable design
- ✓ Easy to use
- ✓ Excellent durability
- ✓ Cost-effective option

VS

INFLATABLE PENILE IMPLANT

- ✓ Provides a more natural flaccid and erect state
- ✓ Completely concealed within the body
- ✓ Greater comfort and cosmetic appearance
- ✓ Premium solution with excellent satisfaction

ADVANCED SURGICAL CARE AT EROS HOSPITAL

- Advanced prosthetic techniques
- Precision-based operative planning
- Meticulous tissue handling
- Strict infection prevention protocols
- Evidence-based antibiotic measures
- Modern OT standards
- Careful implant selection & sizing
- Comprehensive pain management
- Structured recovery & follow-up

HOSPITAL STAY

- Admission on the day of surgery or one day prior
- Surgery duration: 60–120 minutes
- Hospital stay: Usually 1–2 days
- Discharge after adequate pain control and recovery

RECOVERY TIMELINE

FIRST WEEK

Mild discomfort, swelling and bruising are expected. Regular medications and wound care.

WEEKS 2–4

Gradual return to routine daily activities. Avoid strenuous exercise.

WEEKS 4–6+

Follow-up examination: Implant education & activation guidance (where applicable). Sexual activity after surgeon confirms complete healing.

COST OF SURGERY

The overall cost depends on the implant selected and individual treatment plan.

APPROXIMATE COST

₹2,00,000 –
₹5,00,000

Final estimate will be provided after consultation and implant selection.

BENEFITS

- Reliable erections whenever desired
- High patient & partner satisfaction
- Completely concealed inside the body
- Long-lasting treatment option
- Does not affect urination
- Orgasm & ejaculation are generally preserved unless affected by other medical condition

POSSIBLE RISKS

- Infection
- Bleeding
- Pain
- Minimally invasive infection-control measures
- Protocols are followed to reduce risks
- Device malfunction over time
- Rare need for revision surgery
